

Professional Services

Health Check and Configuration Audit

OVERVIEW

Invest in a next-generation firewall and always operate at optimum condition. Our Health Check and Configuration Audit Service is a comprehensive examination of the best tailor-fit solution for your operations.

Our consultants will discuss with you the possible security exposures, make recommendations, design and configure your system to make sure that it is fully optimized and aligned with your organization's network security goals.

BENEFITS

Our consultants will review your next-generation firewall topology and architecture on and off-site:

- Review of topology design requirements, priorities, and organization security objectives
- Address any design related questions
- Review of protocol design and configuration
- Review of feature design and configuration
- Recommendation based on requirements
- Recommendations on next generation firewall security design
- Recommendations pertaining to design related issues
- Management options will also be discussed, including central management via Panorama, as well as logging and SIEM solutions

HEALTH CHECK AND CONFIGURATION AUDIT

Our consultants will analyze the existing production next-generation firewalls and examine performance metrics. The consultant will review traffic, threats, WildFire, and system logs, and make recommendations on changes if applicable. The consultant will also review firewall system parameters, such as sessions, resources, and drops and verify that the firewall is performing optimally. The consultant will then compare the configuration with current best practices and provide feedback if there are optimizations available to increase performance. The consultant will also validate the configuration of the next-generation firewall feature sets and suggest ways to make the best use of various features such as: App-ID, User-ID, Content-ID, and Global Protect.

- ✓ Design Review
- ✓ Health Check
- ✓ Feature Optimization
- ✓ Configuration Audit
- ✓ Reporting

FEATURE OPTIMIZATION

Our consultants will provide a system analysis to maintain, tune and optimize your next generation firewall features such as App-ID, User-ID, Content-ID, and Global Protect. The feature optimization process begins with an analysis of the all features ensuring they are aligned with your organizations network security goals. Recommendations on configuration changes may then be provided to further leverage next generation features. Assistance via remote session would then be available to assist in any proposed changes. With the Health Check and Configuration Audit service, organizations can get peace of mind to ensure that their firewall provides the security and performance required to meet their needs.

Founded in Vancouver, BC, February, 2004, X10 Networks deliverables include network engineering, security consulting, network troubleshooting and optimization, project management, training and support services. Leveraging our principals, extensive technical knowledge and long industry experience, we ensure each customer network performs at optimum levels, while meeting business needs and delivering the best return on investment. To help in providing scalable and reliable solutions, X10 Networks partners with various leading and emerging technology vendors. X10 Networks is actively engaged in network and security engineering projects for public and private sector customers such as Education, HealthCare, Transportation, Government, Financial, Insurance, and others. Our extensive background in network communications along with strong relationships with leading vendors in the industry gives us a unique perspective in providing end-to-end networking solutions in areas of Network Infrastructure, Network Security and Application Delivery.
